## RUBBER HANGERS

MATERIAL USED-EPDM (Ethylene Propylene Diene Monomer)

EPDM is used to make more weather as well as ozone resistance components.

After studying the market requirement, CEW has recently started its own manufacturing plant for rubber components.

Timely delivery of rubber plus metal components is ensured as CEW has its own Sheet metal plant as well as Electroplating plant.

M/S. Charanjeet Engg. Works has started its function in 1989 by manufacturing Steel Clamps and other sheet metal components for automotive exhaust systems for a highly reputed export merchandiser. Confidence gained from the experience of nearly 15 years in the field, company started its export in 2004.

To increase quality and to ensure timely service, CEW started its own electroplating plant providing necessary passivations required by the customer. To meet its production requirements, CEW has well-planned and well-constructed facilities spreaded over two units which are ISO certified.

Seeing the feasibility, CEW has gradually expanded its production range by adding RUBBER MOUNTINGS by recently opening a different plant specially for Rubber Components.

Due to uncompromising approach to the quality aspects of its product and service backed with the sheer commitment to ensure the utmost satisfaction of the customers, today CEW boasts of a broad customer base globally, especially in Europe, USA, Australia and others.

Understanding the highly competitive nature of global market, CEW has kept the prices of its very economical, thus enjoying a healthy advantage.
